

**AMENDMENTS TO THE SPECIFICATION**

Please replace Paragraph 0040 with the following replacement paragraph:

[0040] The present invention presumes that the wireless network component is mounted in a suitable ~~overhead~~ overhead location on or near the fluorescent light. Preferred methods and structures for mounting a wireless network component on a fluorescent light are described in co-pending United States Patent Application No. 10/790,644, filed March 1, 2004, which is commonly owned by the present assignee and incorporated herein by reference in its entirety. However, other methods for overhead mounting of a wireless network component are possible, including but not limited to the use of brackets, adhesives, magnetic couplings, screws, nails and other fasteners, hooks, etc. It should therefore be appreciated that the present invention is not limited to any particular mounting configuration of a wireless network component.
